## Instructions for using this Ad Hoc Report Map:

This map can be used to create Ad Hoc Reports in your AIM Montana Edition. These reports are the same structure as those in the AIM State Edition. The reports most commonly used to compare data in your AIM Montana Edition to data from your local Student Information System (SIS), but can also be used to create functional reports for district reporting purposes.

From the **Index**, expand **Ad Hoc Reporting**. Select **Filter Designer**. Select *Create a new Filter using the Query Wizard* from **Create a New Filter** and *Student* from **Filter Data Type**. Select the fields based upon the **Ad Hoc Report Map**. Click **Next**. Enter the *Operator* and *Value* as appropriate. Enter the report name under **Query Name** and choose an **Organized to:** location. You can save filters to your **User Account** or to other district **Groups** (saving to district groups depends upon the setup established by the District System Administrator). Click **Save**.
